

Autodesk Fusion CORE: Assembling Components

man  machine
eLearning

COURSE DESCRIPTION

This **Autodesk Fusion CORE: Assembling Components** course uses a mixture of text, imagery and video-based learning content, to teach new users the basics of creating their first assemblies. During this course, users will learn how to add multiple components to their designs, as well as work with joints to assemble their components together. Each learning module is followed by exercises and knowledge checks, where relevant, to help users retain the information they've learnt. On completion of this course, users will be able to start building up their own assemblies from parts, which they have modelled inside of Fusion.

COURSE MODULES

- Adding Multiple Components to a Design
- Working with Joints
- Using Fasteners
- Editing Components 'In Place'
- Creating Components
- Modifying Local Components
- Regular Knowledge Checks per Module
