

BIM 360 Docs: Fundamentals

On this course you will be taught the core functionality in Autodesk BIM 360 Docs, alongside crucial system administration and configuration techniques. The first half of the day focuses on user training, covering the core principals of using the BIM 360 Docs system. In the second half of the day, we will look at your own BIM 360 Docs configuration and assist with the project setup and configuration, as well as providing recommendations on industry standards and best practice.

Course Modules

- *User Interface and Navigation*
- *Adding Members and Controlling Permissions*
- *Setting Up Project Folders and File Structures*
- *Uploading Documents*
- *Viewing Models and Documentation*
- *Working with Markups*
- *Creating Issues*
- *Sharing and Distributing Documents*

Prerequisites

An understanding of construction project terminology is recommended. A subscription to Autodesk BIM 360 Docs and an iPad 4 or newer with the Autodesk BIM 360 Docs application would be beneficial.
