

BIM CONSULTING AND AUTODESK CONSTRUCTION CLOUD IMPLEMENTATION

CUSTOMER CHALLENGE

This well-known MEP contractor needed to work with an Autodesk partner to develop its digital strategy, enabling them to meet their BIM objectives (improved design efficiency and cost savings) and desire to align with the ISO19650 international standards.

PROJECT GOALS

The main goal for this client was to gain extensive BIM knowledge and upskill to ISO19650 standards. This needed to involve an extensive training and consulting programme to help all their engineers to work to their maximum ability.

SOLUTION

Man and Machine developed a programme for the client which included the provision of the following services:

- BIM Ready Training
- E-Learning Content
- BIM Consulting
- Software Support and Administration
- Software Audit Support
- Software Product Training

BUSINESS OUTCOMES

As part of this programme, the client has now migrated their collaboration solution from the BIM 360 platform to the Autodesk Construction Cloud (ACC) and is one of the UK's largest ACC clients. During this process, Man and Machine also developed significant e-learning content and videos that can be used for existing engineers to recap or to train new employees.

CONCLUSION

This programme has allowed the client to carry out their work to meet government standards and guidelines. By using this integrated platform they are now able to recognize and eliminate any design issues or clashes earlier in the process.
