

BIM AND DIGITAL ADOPTION PROGRAM FOR MULTI-DISCIPLINARY ENGINEERING ORGANISATION

CUSTOMER CHALLENGE

Due to the number of disciplines within the business and the wide spread use of offices across the UK, there have been long-standing issues with the varied outputs and standard of work delivered by this client. This needed to be automated and streamlined, to enable them to deliver more consistently across the business.

PROJECT GOALS

Although previous teams had developed good content and a solid basis to work from, it needed improvement. A critical early step was to assess each of the teams in the key offices, in order to create an adoption programme, so that the organisation could reach their desired level of BIM/digital delivery competency.

SOLUTION

Man and Machine were able to help this client reach their goals by providing them with the following:

- BIM and Digital Assessment Consultancy
- Company-wide Roadmap and Adoption Plan
- Project Consultancy and Information Manager Support
- Tailored Software Training
- Autodesk Construction Cloud Deployment and Training
- Support
- E-Learning Content

BUSINESS OUTCOMES

Driving change in any organisation is often a challenge. However, by having an agreed plan with the senior team, we were able to carry out this project with the whole organisation understanding why it is being implemented. During this process Man and Machine also helped the customer to implement and adopt the Autodesk Construction Cloud software to further increase their productivity and collaboration.

CONCLUSION

With the help of Man and Machine, this client is now able to carry out their projects to their desired level of BIM/digital delivery whilst supporting the ISO19650 standards.
