

# BIM for Project & Construction Professionals

## Course Description

The BIM Manager course is designed for project and operations staff working on BIM projects. It is suitable for Project Managers, BIM Information Managers, engineering staff, modellers and coordinators, who want to gain a broader understanding of BIM outside their specific role.

As well as getting a broader understanding of BIM principles, you will gain in-depth knowledge of BIM project workflows and methodologies, including detailed learning on project-related documents such as the EIR (Employers Information Requirement) and the BEP (BIM Execution Plan).

## Prerequisites

A basic understanding of the principles of BIM and some exposure to 3D modelling is desirable. This is taught in our 1 day BIM Fundamentals course.

BIM Management
