

## Solibri Rules Workshop

This rule writing workshop is an essential follow-on to the Solibri Fundamentals course if you need to extract maximum value from the tool. It will teach you how to create customised rulesets for quality assurance and BIM model validation. You will also learn how to use the advanced features of the tool to create model checking rules, as well as gaining a thorough understanding of how to do advanced information take-off and checks for correct component classifications.

### Course Modules

- *Introduction and Principles of BIM*
- *Introduction to Rules Based Checking*
- *Component Classification*
- *Advanced Information Take Off*
- *Advanced Rule Checking*
- *The Ruleset Manager*
- *Creating and Updating Rules*
- *Processing Models*
- *Using Hyperlinks*
- *Creating your Rules Workshop*

### Prerequisites

A good working knowledge of 3D design is desirable, preferably using Revit software. You should also have undertaken the Solibri Fundamentals course.

### Course Duration

2 days

### Next Steps

A Bespoke Course
